messages: List[AnyMessage]
document_text: str
remaining_steps: str
html: str

analysis_node: receives the most recent message which is the full text of the ingested pdf. Creates a structured output for the analysis field of the LandingPageAgentState

generate_query_node: takes the analysis field of the **LandingPageAgentState** and uses it as part of its input. Generates a short query to be used for image search/image generation. This is concatenated to the messages list in the state.

image_gen_node: takes the previous message (the generated query from previous node), and uses that as the input for the image tool. Image tool concatenates a message to the messages list containing the image url

```
messages: List[AnyMessage]
analysis: str
image_url: str
nl: str
```
